

# ***Rebuilding Market Confidence in Consumer Products - The Perspective of Consumers***

Dr. Elizabeth Nielsen,  
Consumer and Public Interest Committee,  
Standards Council of Canada  
E-mail: [knielsen@magma.ca](mailto:knielsen@magma.ca)

# ***Outline***

- ✧ Current Situation or Landscape
- ✧ Consumer expectations
- ✧ Issues from perspective of consumers
  - Recalls, unapproved products, counterfeit products
- ✧ Solutions – legislative, role of standards
- ✧ Consumer Policy Committee of ISO's WG on Consumer Product Safety.

## ***Current Situation***

- ❧ Free trade economy and open market.
  - ❧ Journey from factory floor to retail shelf often spans the globe.
  - ❧ Open markets are built on consumer confidence
  - ❧ Recalls resulted in loss of consumer confidence  
e.g. searching for toys not made in China
  - ❧ Consumer product safety legislation with limited powers
  - ❧ Gaps in certification procedures and policies
  - ❧ With price pressures and increased importation – problems expected to increase
  - ❧ Complex, decentralized recall system - federal and provincial agencies, each with their own criteria, rules and procedures.
- 

# ***Expectations of Consumers***

- ❧ Consumers expect that as long as they follow directions, the product will be safe to use
  - ❧ Industry is responsible for designing and marketing safe products
  - ❧ Transparency about hazards associated with products
  - ❧ Government will prevent unsafe products from entering the Canadian market
  - ❧ Hazardous products stopped from being marketed, rather than relying on after-the-fact recalls
  - ❧ Consumers expect choice, quality and value for money
- 

# ***Recall of Regulated Products***

## **Design Flaws**

- small parts, magnets, sharp edges

Independent of location

## **Manufacturing Flaws**

- Poor assembly,
- unacceptable raw materials

Magnetic Flat Top Crib  
Model # 1000

Small part  
choking hazard

Rail height to low –  
falling hazard

Lead in paint

Date rape  
chemical on  
surface

# Certified Products Recalled

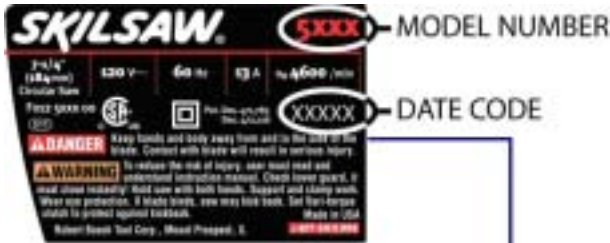

Air Exchange  
System – fire hazard  
UL mark

CBs certify products to a standard  
Recalled – in use product found to be  
defective or has caused injury

- Manufacturing flaw
- Inadequate standard

Skil saw –  
CSA Cert.  
switch can be  
locked in on  
position

36200

Humidifier  
leakage into  
electrical  
components  
Intertek mark

# ***Unapproved Electrical Products***

Alerts published by ESA

Rug warmers  
can cause fire hazard

Unapproved gas generator  
Exhibits many safety problems

Lamp can overheat  
and cause fire

# ***The Gaps/Grey Areas***

Bicycle Trailer –  
coupling failure,  
voluntary recall  
negotiated by Health  
Canada

Bicycles – frame failure

Battery operated tools

# Counterfeit Products or Marks

Counterfeit  
Thermal Detector  
Warning by ULC –  
March 20, 2008

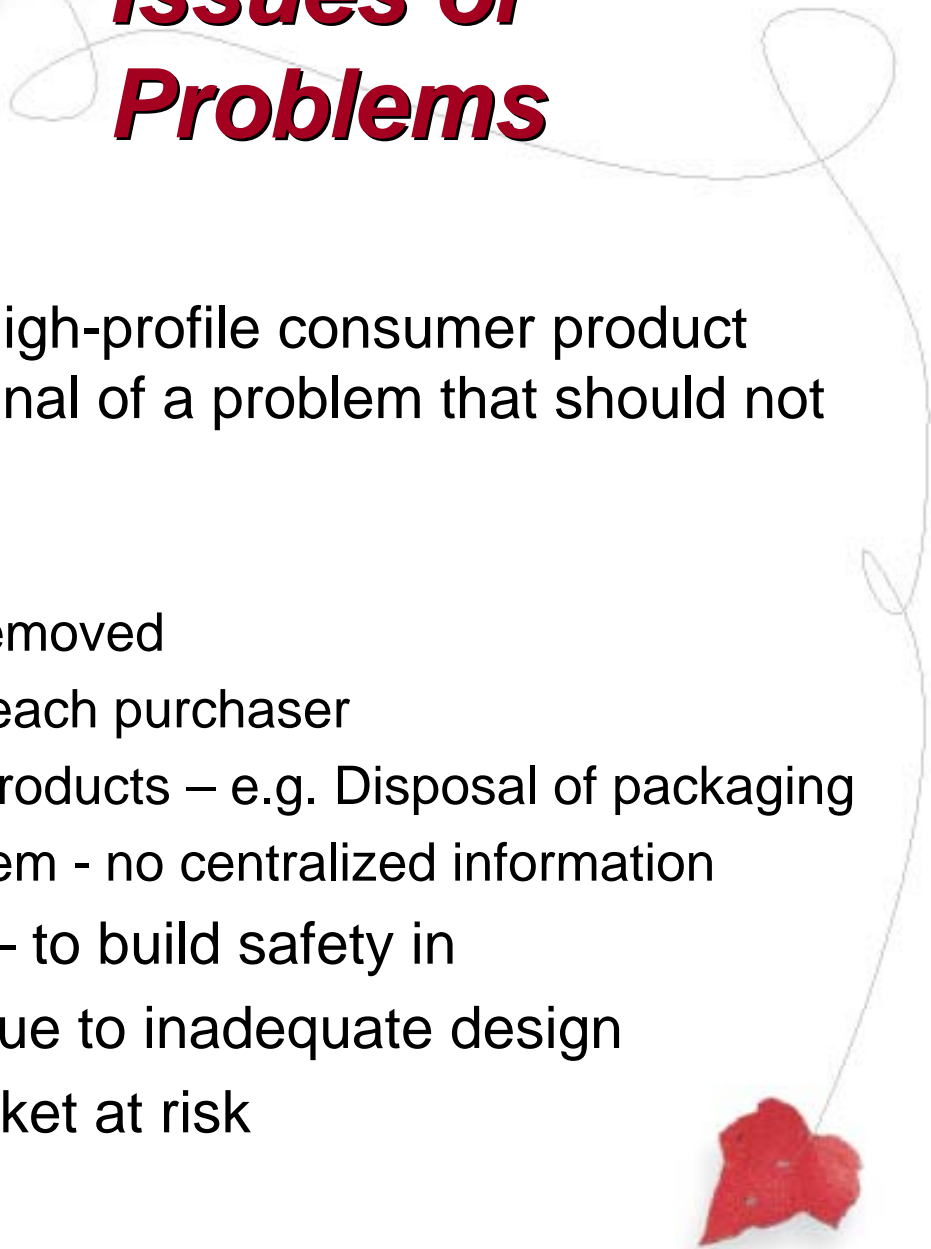

Counterfeit  
Batteries  
RCMP  
Report  
Winter 2006

Crafting Iron with  
Counterfeit Mark  
Warning by CSA –  
March 11, 2008

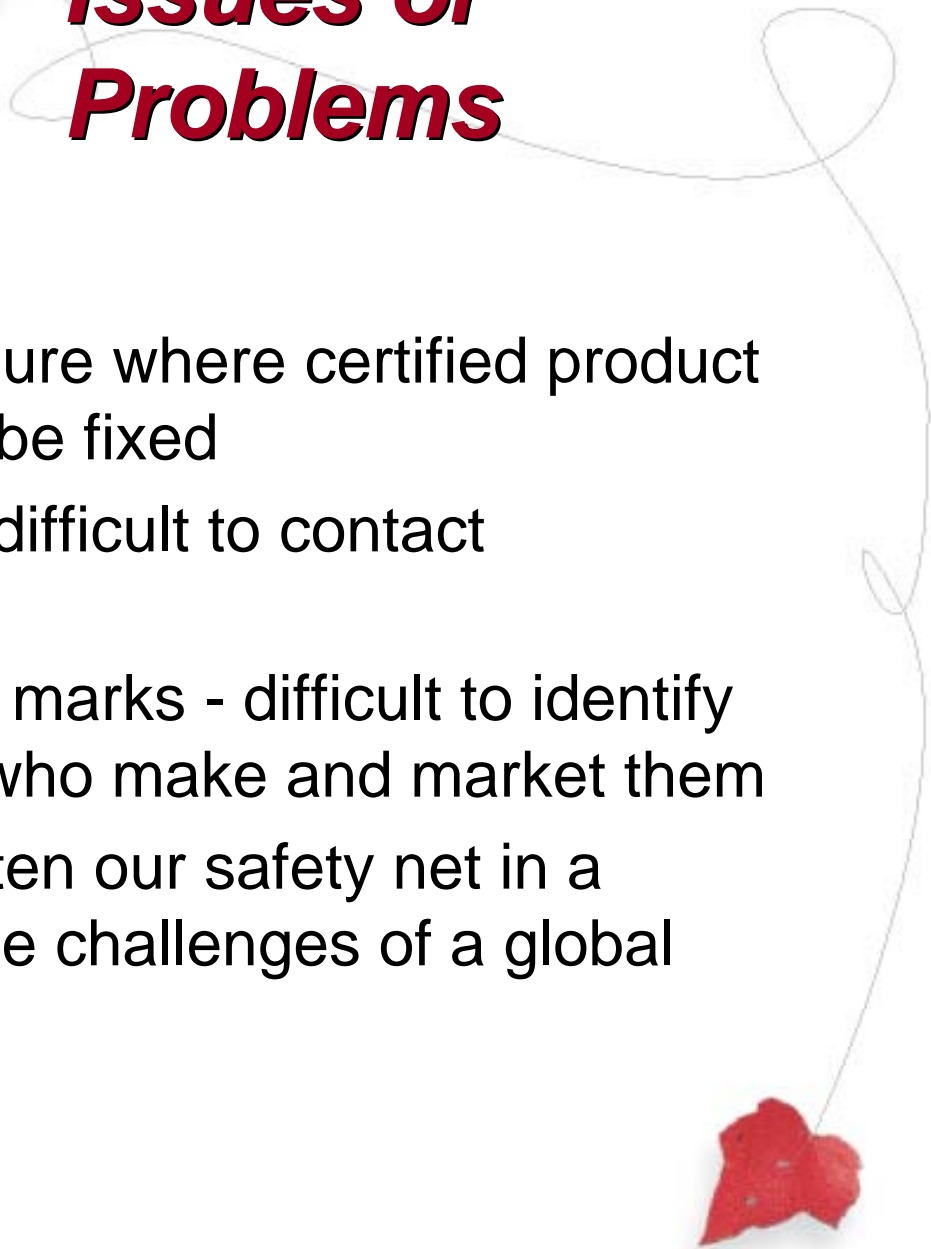

# *Issues or Problems*

- ⌘ Too many and too frequent high-profile consumer product recalls have given a clear signal of a problem that should not and cannot be ignored
  - ⌘ Effectiveness of recalls
    - ⌘ Small percentage actually removed
    - ⌘ Information often does not reach purchaser
    - ⌘ Difficult to identify recalled products – e.g. Disposal of packaging
    - ⌘ Complex decentralized system - no centralized information
  - ⌘ Lack of proactive measures – to build safety in
  - ⌘ Design - 80% of toy recalls due to inadequate design
  - ⌘ Consumer confidence in market at risk
- 

# *Issues or Problems*

- ❧ No clear policy or procedure where certified product causes harm and has to be fixed
- ❧ Complex supply chain – difficult to contact manufacturer
- ❧ Counterfeit products and marks - difficult to identify and trace back to those who make and market them
- ❧ How to continuously tighten our safety net in a sustained way to meet the challenges of a global economy.

# ***Solutions***

- ❧ New legislation – Proposed federally and implemented provincially – gives the tools.
- ❧ Centralized recall data base - Health Canada initiated
- ❧ Product related injury data base
- ❧ Improved safety standards and quality assurance procedures
- ❧ Information to consumers about the problems associated with constant price reduction
- ❧ Mechanisms for the traceability of products
- ❧ Increased involvement of custom authorities to prevent unsafe products from entering the country

# ***Role for Standards Community***

- ❧ Product Safety Standards can be effective in designing safe products and reducing injuries
- ❧ More effective than recalls
  - ❧ Proactive and can have impact on whole class of products
  - ❧ Eliminate hazards in product before it is produced
- ❧ Factors to be considered when developing standards
  - ❧ Potential users and their abilities
  - ❧ Foreseeable use patterns
  - ❧ Holistic approach to safety of product
  - ❧ Performance based/ horizontal standards to keep up with technological change

## ***COPOLCO WG on Product Safety***

### **Purpose:**

**“To promote the design and manufacture of safe consumer products through the work of COPOLCO and ISO.”**

## ***Work Underway***

- ❧ Guidance standard on Consumer Product Safety - to provide practical tools to suppliers to identify, assess and eliminate risks related to consumer products
  - ❧ Proposal to revise Guide 51
  - ❧ Role for standards in identifying data elements required for product related injury data collection
  - ❧ Domestic water treatment devices
  - ❧ Adequacy of instructions - assembly, maintenance & use
  - ❧ Monitor development of Nanotechnology standards
-
